

An aerial photograph of a dense, vibrant green forest. In the center, there is a cluster of interconnected ponds or a winding stream, reflecting the sky. The forest is partially shrouded in a soft, white mist or fog, creating a serene and ethereal atmosphere. The image is framed by a white diagonal shape in the top right corner and a bright green diagonal shape in the bottom left corner.

Sustainability Report 2024

auxalia Group

SCOPE OF THE REPORT: The Sustainability Report 2024 covers the auxalia Group, including the companies auxalia Beteiligungs GmbH, auxalia GmbH (Germany), auxalia GmbH (Switzerland), ICN Management BV, ICN Solutions BV, CADEXpress BV, ICN Systems BV, ICN Development BV, Druchtman & Partners BV, JobEngineers BV and JobEmployees BV.

NOTE: The WESTCAM companies were acquired in December 2024 and are not yet included in the scope of the report for the 2024 reporting year. Integration will take place from the 2025 reporting year onwards, and reporting will be extended to cover the entire auxalia WESTCAM Group („aWG“).

Executive Summary

The company looks back on a dynamic financial year in 2024. The aux:alia Group recorded a strong increase in revenue, which rose further with the acquisition of the WESTCAM Group in December 2024, resulting in total revenues of over €60 million.

By the end of 2024, the workforce had grown considerably across all company units. Following the integration of the WESTCAM Group, the total number of employees increased to approximately 180.

Key ESG results for 2024

EcoVadis rating: 46/100 points (25th percentile)

Total emissions estimated with EcoVadis (Scope 1-3): 3,634 t CO₂e

Employee satisfaction (GPTW Trust Index): 83% approval

Customer survey: Sustainability is currently rated 2.78/5 on average

Highlights 2024

As part of the „aux:alia Forest“ project, 2,500 m² of new habitat was created and 600 trees were planted. [To the project report](#)

With the announcement of a funding programme worth over €100,000 the aux:alia companies will actively support sustainable construction projects. [To the Announcement](#)

The ICN Group joined forces with HP to participate in the social project „Spieren voor Spieren“, a Dutch initiative to support children with muscular diseases. [To the project](#)

Outlook for 2025

The integration of the WESTCAM Group into the corporate group and into the sustainability reporting is planned for 2025. The ESG initiative will be extended to the entire group (code of conduct, ESG training, ESG rating). The objectives are to improve the EcoVadis rating by at least 10 points by the end of 2025, to strengthen public ESG communication by 50%, to improve customer perception of sustainability and to generate a significant contribution margin through the sale of sustainable solutions.

About this report

This report has been prepared voluntarily and is based on the structure and format of the GRI Standards 2021, an internationally recognised framework. In addition, the requirements of the EcoVadis rating and fundamental aspects of the CSRD have been taken into account, insofar as they are relevant to a medium-sized, unlisted company. The reporting period covers 1 January 2024 to 31 December 2024. Reports are published annually. The companies listed at the beginning of the report are included; the WESTCAM Group, acquired in December 2024, will be integrated from 2025.

Material topics

In the reporting year 2024, the aux:alia companies established the initial foundations for a future materiality analysis. Among other things, the results of the EcoVadis rating, internal KPI analyses (e.g. CO₂ emissions, gender pay gap, training and development), the customer survey (November 2024) and the employee survey (Great Place to Work) were taken into account.

A full materiality analysis in accordance with the requirements of the GRI Standards and the CSRD has not yet been carried out. For the aux:alia Group and the future aux:alia WESTCAM Group, as a medium-sized, unlisted company, there is no legal obligation to prepare a sustainability report under the CSRD. Nevertheless, we are gradually preparing for the increasing expectations of our customers, business partners and investors.

Company profile

The auxalia Group was formed in 2019 from a merger between bytes & building GmbH and CADStudio GmbH, and was acquired by SOPHORA Unternehmerkapital in 2023. The auxalia companies specialise in software solutions and services in the areas of Building Information Modelling (BIM), CAD, data management and process consulting.

In July 2024, parts of the Dutch ICN Group were acquired. The Dutch companies contribute their expertise as Autodesk Gold Partners, particularly in the areas of Architecture, Engineering & Construction (AEC) and Design & Manufacturing (D&M). In addition, ICN operates one of the largest CAD web shops in the Benelux countries and has extensive experience in hardware sales.

This was followed in mid-December 2024 by the merger with the Austrian WESTCAM Group. The WESTCAM Group expands the portfolio to include manufacturing technologies such as CAM, CNC milling, 3D printing and 3D measurement technology, as well as automation and image processing solutions for mechanical engineering.

The auxalia WESTCAM Group presents itself with a business model that supports digital transformation in construction, manufacturing and mechanical engineering processes, focusing on sustainable and resource-efficient working methods.

Key figures for 2024

The company looks back on a dynamic financial year in 2024. The auxalia Group recorded a strong increase in revenue, which rose further with the acquisition of the WESTCAM Group in December 2024, resulting in total revenues of over €60 million.

The largest locations of the auxalia Group are in Hamburg, Bad Dürkheim and Darmstadt. The ICN Group is mainly based in ,s-Hertogenbosch, Netherlands. The WESTCAM Group complements this presence with central locations in Mils near Hall in Tyrol and in St. Florian near Linz, Upper Austria. In addition, there are other smaller branches in Austria, Switzerland and Czechia with fewer employees, which contribute to regional presence and customer proximity.

Vision and mission

The vision and mission of the auxalia Group are summarised in the guiding principle „We build digitally“: Technology is understood as an enabler for resource-saving, sustainable and future-oriented work in construction and manufacturing. This mission statement is currently being further developed to reflect the future auxalia WESTCAM Group as a whole, thus also including the mechanical engineering sector.

Governance, ethics & compliance

Until 2024, Andreas Hofherr was the sole Managing Director. With the merger with the WESTCAM Group on 13 December 2024, the auxalia WESTCAM Group (registered company name: auxalia WESTCAM Holding GmbH) was formed, and Markus Ebster, previously Managing Director of the WESTCAM Group, was appointed as an additional Managing Director of the auxalia WESTCAM Group. The majority shareholder is SOPHORA Unternehmerkapital, with further shares held by the former shareholders and the management team.

Sustainability is anchored as a strategic pillar for the further development of the Group at both management and shareholder level. The Group has a Code of Conduct, a whistleblowing system, and clear data protection guidelines. The consolidated financial statements of the auxalia Group, prepared for the first time in 2023, are audited by SKNvonGEYSO Rechtsanwälte Steuerberater Wirtschaftsprüfer Partnerschaft mbB.

Anti-corruption and integrity

The group pursues a clear zero-tolerance policy towards corruption, bribery and unethical behaviour. This is based on a binding code of conduct that sets standards for integrity, transparency and fair competition. It applies to all employees and business partners and regulates, among other things, the handling of conflicts of interest, gifts, benefits and confidential information.

To support these principles, a whistleblowing system was introduced in 2024. This enables employees and external stakeholders to report possible violations of laws, internal guidelines or the Code of Conduct anonymously and confidentially. Reports can be submitted via a digital portal or by email to a specially set up compliance address. All reports are reviewed by an independent internal body and treated confidentially. Whistleblowers are expressly guaranteed protection from reprisals or discrimination.

No reports were received in the 2024 reporting year.

In addition, aWG is preparing formal training courses on anti-corruption and compliance. The aim is to train all employees regularly in future and thereby further strengthen awareness of ethical behaviour. To date, there have been no documented violations or incidents.

With these measures, the auxalia Group and, in future, the auxalia WESTCAM Group ensure that ethical business conduct is firmly established and continuously developed.

Tax transparency

The auxalia Group is committed to responsible and transparent tax practices. The companies fulfil all legal tax obligations in the countries in which they operate, thereby contributing to public financing and social development.

Aggressive tax planning or the use of tax havens is expressly excluded. Tax practices are based on compliance with all national and European regulations. The tax strategy is guided by the principles of integrity, legal certainty and transparency.

The consolidated financial statements are audited by external auditors. All tax obligations were duly fulfilled in the 2024 financial year.

Sustainable procurement

The auxalia Group is a medium-sized software and consulting company and forms part of a predominantly European supply and partner network. A key focus lies in technology partnerships, in particular with Autodesk, a global leader in digital design and construction processes. This partnership ensures that the solutions offered are based on international standards and are complemented by Autodesk's high compliance and sustainability standards.

For the Group, sustainable procurement means that, in selecting suppliers and partners, ecological and social criteria are considered in addition to quality and cost-effectiveness. In 2024, the first measures were implemented:

- Introduction of supplier declarations with ESG-relevant minimum standards
- Integration of sustainability criteria into the selection of new partner companies
- Verification of compliance with fundamental labour and human rights among key service providers
- Raising awareness among purchasing and project managers of issues such as environmental protection, data security and fair business practices

With the merger forming the auxalia WESTCAM Group, the procurement and partner network will in future be expanded to include the mechanical engineering and manufacturing sectors. This brings new sustainability requirements within the supply chain – for example, regarding raw materials, hardware components, manufacturing technologies and suppliers. From 2025, an extended Supplier Code of Conduct will therefore be introduced, which will include specific standards for manufacturing and mechanical engineering in addition to software and IT services.

Environment (E)

For 2024, the auxalia Group's environmental data was systematically collected in close accordance with the EcoVadis rating and with the help of EcoVadis' Carbon Estimator Tool. This tool enables companies to estimate their greenhouse gas (GHG) emissions – primarily in Scope 1, Scope 2 and an overview of Scope 3 – based on a small amount of input data, thus creating a reliable data basis. The Carbon Estimator follows the Greenhouse Gas Protocol and offers small and medium-sized enterprises (SMEs) simplified, resource-saving access to emissions assessment.

The Carbon Management Level achieved by the Ecovadis Rating is „Beginner“.

Excerpt from the EcoVadis Carbon Scorecard 2024. The complete Scorecard is attached to this Sustainability Report in the appendix.

Environmental KPIs 2024

Category	Key figure	Value 2024
Scope 1: Direct emissions (heating, vehicle fleet, natural gas)	t CO ₂ e	67,75 t t CO ₂ e
Scope 2: Indirect emissions (electricity, heat)	t CO ₂ e	0 t CO ₂ e
Scope 3: Indirect emissions (including travel, cloud, supply chain)	t CO ₂ e	3.566,07 t CO ₂ e
Scope 1-3 total emissions	t CO ₂ e	3.634 t CO ₂ e
Total electricity consumption at main locations	kWh	61.553 kWh
Recovery through PV system in Bad Dürkheim	kWh	12.695 kWh
Total natural gas consumption at main locations	kWh	224.458 kWh
Air travel	km / t CO ₂ e	103.211 km / 24,6 t
Rail travel	km / t CO ₂ e	22.450 km / 0,8 t
Car travel	km / t CO ₂ e	156.890 km / 31,4 t

Emission reduction targets

On this basis, a multi-year step-by-step plan was developed:

- 2024** Initial estimate of greenhouse gas emissions (Scope 1–2) for the auxalia Group (auxalia Germany + Switzerland and ICN Group) in the form of an EcoVadis report.
- 2025** Greenhouse gas reporting (Scope 1–2) for the auxalia WESTCAM Group. Validation of Scope 1–2 data by external sustainability or climate experts; additional preparation of a decarbonisation analysis with possible reduction paths.
- 2026** Expansion of greenhouse gas reporting (Scope 1–3). Annual greenhouse gas reporting with fixed reduction targets, measured against the base year 2025.
- 2027 – 2029** Continuous reduction of emissions by defined percentages, measured and reported annually.

Climate risks and opportunities

In the 2024 reporting year, climate-related risks and opportunities were not yet systematically recorded in accordance with the TCFD framework. As a medium-sized software and consulting company, the aux:alia Group is only directly affected by physical climate risks to a limited extent, as it does not have any energy-intensive production processes.

However, relevant transition risks arise from changing regulatory conditions in the construction and manufacturing sector, for example stricter requirements for carbon footprints, the increasing relevance of ESG criteria in tenders and the demand for sustainable digital solutions.

At the same time, business opportunities are emerging from the growing demand for software and consulting services in the areas of life cycle analysis (LCA), decarbonisation and sustainable construction. These opportunities are already reflected in the expansion of our ESG portfolio (e.g. One Click LCA, training programmes, funding initiatives).

From 2025 onwards, the integration of the WESTCAM Group will also include the mechanical engineering and manufacturing sector. This will give rise to additional risks, for example due to higher requirements for energy efficiency, resource utilisation and supply chain transparency. At the same time, new opportunities will arise, for example through the use of sustainable manufacturing technologies such as 3D printing, CAM optimisation and automated measurement technology, which enable resource savings and efficiency gains.

Social (S) – KPIs 2024

Employees

With the acquisition of the WESTCAM Group, the number of employees has increased to approximately 180.

Diversity & equality

A special feature of the auxalia companies is the high proportion of women at 62%, while the ICN companies still stand at 39%. In management positions at auxalia companies, around one third of roles are held by women. The picture is also positive in terms of diversity: 18% of employees at auxalia companies belong to minorities, while at ICN companies this figure is 0%.

Remuneration

In the area of remuneration, the company sees encouraging potential for further progress. The analysis shows that there is still room to reduce the gender pay gap and to create an even more balanced overall remuneration structure. Building on these insights, the company aims to further strengthen its compensation approach to promote fairness, transparency and long-term employee satisfaction.

Benefits

In addition to base salary, the auxalia Group offers its employees a range of voluntary additional benefits. A key benefit is the Spendit Card, a tax-free non-cash allowance that is credited monthly. Employees can use this card flexibly for private everyday expenses.

Employees who have been with the company for at least three years are also eligible for an occupational pension scheme. In this context, the auxalia Group supports the build-up of an additional retirement provision by paying contributions into a pension plan or by providing subsidies for individual salary conversion schemes.

Employee satisfaction

Employee satisfaction at the auxalia Group is at a high level, with a GPTW Trust Index approval rating of 83%. This illustrates the trust that employees have in the corporate culture and leadership. Another survey is planned for 2025. This will be extended to cover the entire auxalia WEST-CAM Group.

Further training

There was also significant investment in further training in 2024: employees at auxalia companies took part in an average of 9.53 hours of training & development per person. Particularly noteworthy are the corporate influencer programme (180 hours in total), the sales impulse workshop (96 hours) and the methodology workshop for managers (112 hours). Complete training figures are not yet available for the ICN companies and the WESTCAM Group, but systematic recording is planned from 2025 onwards.

Social commitment

Visible progress has also been made in the area of social commitment. The „auxalia forest“ project involved planting 600 trees to create a new habitat covering an area of 2,500 m². In addition, the ICN companies joined forces with HP to participate in the Dutch project „Spielen voor Spieren“, which supports children with muscular diseases.

Occupational health and safety

The auxalia Group considers the protection of its employees' health and safety to be a key responsibility. Even though the company operates primarily in office environments and there are no traditional production risks, clear standards apply to prevent accidents and promote well-being in the workplace.

Existing measures include ergonomic workplace design, flexible working hours and home office models, as well as health promotion offers such as workshops and mental health programmes. The company plans to further systematise data collection and documentation on occupational health and safety from 2025 onwards in order to increase transparency and enable continuous improvement.

Accidents at work and occupational illnesses

In the 2024 reporting year, no occupational accidents or work-related illnesses were documented in the auxalia Group. There were no absences, occupational illnesses or fatalities as a result of work activities.

Market leadership and sustainable solution portfolio

The auxalia Group – and in future the auxalia WESTCAM Group – assesses its ESG performance in the area of sustainable solutions and products through a holistic approach. The overarching aim is to further develop sustainable offerings, strengthen their economic viability, and continuously increase their visibility in the market.

A key focus lies in expanding the portfolio of sustainable solutions and ensuring that these offerings make a growing contribution to the overall business. At the same time, the company aims to enhance its public presence on sustainability topics by providing accessible information, insights, and resources that support the industry in adopting more sustainable practices.

Customer perception also plays a vital role. By increasing the visibility and relevance of its ESG activities, the company aims to strengthen its position as a trusted partner for sustainable digital planning solutions. Regular feedback helps to ensure that the organisation remains aligned with market expectations and continues to build its reputation in the field of sustainable construction.

Overall, this combined approach provides the foundation for long-term ESG success and guides the continuous development of sustainable solutions across the Group.

Financial target

In 2024, auxalia marked an important strategic milestone by entering into a partnership to expand its portfolio of sustainability-focused solutions. As part of this initiative, the company also developed training formats designed to support customers in the practical application of life cycle assessment methods within digital planning environments.

To accelerate market entry and encourage the adoption of sustainable building practices, 2024 was designated as an investment year. As a key measure, auxalia launched a funding programme aimed at supporting architecture and engineering practices in integrating life cycle assessment into their workflows. The programme provides selected Revit-using practices with access to a One Click LCA licence, along with dedicated support services for a full year. Through this initiative, auxalia enables participating firms to apply sustainability assessments more effectively in real-world projects and helps establish the basis for practical case studies and broader market development.

With these investments, auxalia has laid a solid foundation for expanding its sustainability-related solution portfolio from 2025 onwards and for strengthening its long-term market position in the field of sustainable construction.

ESG communication 2024

In 2024, the aux:alia Group expanded its ESG communication activities across a variety of formats, including videos, e-books and blog contributions. These measures helped increase visibility, generate valuable interest from potential customers, and strengthen the company's positioning in the field of sustainable digital solutions.

[Download eBook](#)

Customer survey 2024 – Perception of „sustainability“

In 2024, a customer survey was carried out to assess how the aux:alia Group is perceived in relation to sustainable solutions. The results showed that the company is already recognised for its activities in this area, although the perception is not yet market-leading. A noticeable share of respondents associates aux:alia with sustainability, indicating a solid foundation for further development.

From 2025 onwards, the survey will be expanded to cover the entire group, supporting the continuous improvement of visibility and positioning in the field of sustainable construction.

EcoVadis rating 2024 result

In 2024, only the auxalia Group was included in the EcoVadis rating. The WESTCAM Group will be included in the assessment from 2025 onwards.

The result: the auxalia Group achieved an overall rating of 46 out of 100 points, placing it in the 25th percentile of all companies assessed. The company was awarded the „Committed“ badge.

The year 2024 thus marked the start of systematic ESG scoring, which will be reviewed annually and gradually improved in the future.

Individual results for 2024

ENVIRONMENT (48/100 POINTS): The first-ever complete CO₂ and energy balance estimate for all main locations (Scope 1–3) was highlighted as a positive development. There is potential for improvement in the definition of ambitious reduction targets and in external certifications (e.g. ISO 14001).

LABOUR PRACTICES & HUMAN RIGHTS (48/100 POINTS): Strengths lie in high employee satisfaction (83% GPTW Trust Index), transparent diversity and remuneration reporting, and an open corporate culture. In addition, formal policies still need to be strengthened.

ETHICS (38/100 POINTS): A code of conduct and a whistleblower system have been implemented, but the processes need to be further documented and brought more into line with international standards.

SUSTAINABLE PROCUREMENT (43/100 POINTS): Initial measures such as supplier declarations have been established. Systematic integration of ESG criteria is still pending and will be a key lever for the coming years.

Recommended action and target for 2025

As part of the EcoVadis assessment, the Group has set itself the goal of establishing clear standards for responsible conduct by introducing two codes of conduct. A supplier code of conduct defines the requirements under which cooperation with business partners is possible and commits them to high standards in the areas of human rights, environmental and climate protection, fair business practices and sustainable procurement. In addition, a corporate code of conduct sets out the values and guidelines for all employees and managers, including integrity, transparency, equal opportunities, occupational health and safety, resource conservation and ethical business conduct. An employee handbook is also being established to serve as a guide for new and existing employees of the group and to provide transparent information.

In order to effectively anchor these principles, quantitative targets are defined in all areas relevant to EcoVadis – environment, labour and human rights, ethics and sustainable procurement.

The group of companies derives concrete measures from these targets: responsibilities are clearly assigned, monitoring and reporting systems are introduced, and training programmes are established for both employees and managers. In this way, the formulated standards are not only documented but also actively integrated into the organisation and the supply chain.

The goal is to increase the auxalia WESTCAM Group's rating by at least +10 points to 56/100 in 2025.

Targets & roadmap 2025+

Based on the base year 2024, the future auxalia WESTCAM Group has developed a clear 5-year plan to systematically embed ESG in all areas of the company and achieve market leadership in the field of sustainable solutions.

In the climate criterion, group-wide greenhouse gas reporting (Scope 1 & 2, from 2026 Scope 3) will be established from 2025, validated by external sustainability experts. Based on this, concrete decarbonisation paths will be developed with the aim of gradually reducing emissions in the following years. In addition, a new climate protection project with a two-year focus on CO₂ reduction will be initiated to visibly support the climate strategy externally.

The sustainable solutions portfolio is geared towards growth and market leadership. The contribution margin generated from ESG products is expected to increase steadily from 2025 onwards, achieving substantial growth by 2028. At the same time, ESG communication is expected to increase resulting in a significantly higher level of public engagement by 2028. While customer satisfaction is expected to show a measurable improvement over the same period, supporting the company's position as a market leader. ESG measures will be rolled out across the group to ensure consistent visibility.

The Group is pursuing a clear development path for its EcoVadis rating: from the first assessments in 2024 and 2025 to bronze status (top 35%) in 2026 and then an annual improvement in the EcoVadis score of at least 5% compared to the previous year. This makes progress measurable and builds trust among customers, partners and investors.

In addition, the merger to form the auxalia WESTCAM Group is being accompanied by cultural measures. With group-wide branding, a binding code of values for all employees and the development of a shared „one team“ feeling, the foundation is being laid for a strong corporate identity and sustainable growth over the next five years.

GRI content index

This report is based on the GRI Standards 2021. As the auxalia WESTCAM Group is a medium-sized, unlisted company and is not currently subject to CSRD reporting requirements, this report is presented on a voluntary basis.

GRI Standard	Disclosure	Page	Status 2024
General information			
GRI 2-1	Organisational profile	6	reported
GRI 2-2	Related companies	7	reported
GRI 2-3	Reporting period, cycle, contact	5 / 24	reported
GRI 2-6	Activities, value chain	6	reported
GRI 2-7	Employees	12	reported
GRI 2-9	Governance structure	7	reported
GRI 2-16	Whistleblowing system	7	reported
GRI 2-22	Sustainability strategy	5 / 22	reported
GRI 2-27	Compliance with laws and regulations	7	reported („0 violations“)
GRI 2-29	Stakeholder engagement	5	reported

Produkt Beschreibung One Click LCA

Appendix

I. I. Product description One Click LCA

ONE CLICK LCA (SOFTWARE LICENCE)

One Click LCA is a leading software platform for life cycle assessment (LCA) in the construction industry, focusing on automated environmental assessments and EPD creation. It integrates more than 300,000 LCA data sets worldwide, supports over 80 standards (e.g. LEED, BREEAM) and is used in 170+ countries.

The platform offers Revit integration via a plugin: Revit users can transfer materials, quantities and component data directly to the LCA tool, carry out LCA studies and make material decisions based on their carbon footprint – all within the Revit workflow.

Why it is relevant to ESG:

- One Click LCA provides well-founded, standard-compliant analyses of embodied carbon, material selection and environmental impact – essential for transparent and robust ESG reporting.
- The Revit integration makes sustainability assessment part of the design process – energy- and material-efficient decisions can be made early on and based on data, supporting CO₂ savings and resource-efficient planning.

TRAINING: REVIT & ONE CLICK LCA FOR LIFE CYCLE ASSESSMENTS

In 2024, auxalia GmbH developed, designed and marketed its new basic seminar „Revit and One Click LCA for life cycle assessments“ for the first time.

The training is aimed at Revit users with basic knowledge and provides the following practical content in a one-day training course (approx. 7 hours):

- Basics of life cycle assessment in construction and classification in sustainability standards (DGNB, QNG, BNB).
- Preparation and structuring of a Revit sample model for export to One Click LCA.
- Application of the One Click LCA plugin for Revit: transfer of component data and material quantities.
- Creating and interpreting life cycle assessment results for certification (e.g. DGNB, QNG).
- Practical exercises to enable independent application of workflows in a project environment.

Why is this relevant to ESG?

The training enables specialist planners to use their BIM models directly for CO₂ and environmental accounting. This makes sustainability operationally applicable: customers learn how to efficiently record and evaluate climate-relevant component data and integrate it into certification processes. The training thus directly supports the ESG criteria of decarbonisation, transparency and sustainable construction.
